

International Harvester Standard Capacity Oil Pump.**71802666 Standard Capacity IH Oil Pump**

Reliance Parts Corp. offers the 71802666 Standard Capacity Oil Pump for D and DT414, 436 and 466 International engine applications. Please note that this Standard Capacity Oil Pump is not interchangeable with the "Increased Capacity" Oil Pump (OE #1808832C92).

These pumps can be easily identified by the thickness of the gerotors –

| Part Number | Description | Gerotor Thickness |
|-------------|--------------------|-------------------|
| 1802666 | Standard Capacity | 1.030" |
| 1808832 | Increased Capacity | 1.240" |

Additional Assembly Notes –

Be careful not to intermix the six oil pump housing bolts with any other fasteners. These bolts have a nylon sealing patch on them that prevents oil seepage in thru-tapped holes and should not be re-used more than three times.

Lubricate the gerotor assembly generously with clean engine oil prior to installation. This will aid in priming and prevent the pump from running dry for the first few moments of operation.
